

# High seas bottom trawling is unsustainable and irresponsible

Each year that it is allowed to continue results in **THE LOSS OF UNIQUE HABITATS**, fragile ecosystems, new species, the dangerous depletion of valuable commercial stocks and solutions of benefit to humankind.

You have a chance to call a time out on the practice **BEFORE IT IS TOO LATE.**

The negotiations ahead of the United Nations General Assembly commence at the start of October. This is when your negotiators will decide the fate of the high seas. It is **YOUR LAST CHANCE** this year, to prevent twelve more months of **Uncontrolled and Unregulated fishing.**

More and more countries are supporting the call for a UN moratorium on high seas bottom trawling. **IS YOURS?**
